

# MOVE UNIFIED COMMUNICATIONS TO THE CLOUD.

## UCaaS can help IT teams efficiently create a more collaborative workforce.

IT departments should choose a solution that best meets business needs, works well with existing technology, and can be deployed quickly. Unified Communications as a Service (UCaaS), a cloud-based solution, accomplishes all three of these goals.

**74%**  
**OF IT DECISION MAKERS**  
report UCaaS provides faster  
access to advanced UC  
features and capabilities\*

## THE BENEFITS OF UCaaS

- Offers quicker access to advanced features and capabilities
- Integrates seamlessly with existing IT resources
- Provides faster access to advanced features and capabilities compared to other UC alternatives, as minimal training and in-house expertise are required for implementation
- Allows you to easily manage Bring Your Own Device (BYOD) policies, which are rapidly growing in popularity
- Scales immediately to meet future business objectives
- Places managing and upgrading the system in the hands of your provider, enabling your IT department to manage other more critical initiatives
- Enables quick integration of future cloud-based solutions that can improve customer service and customer experience as well as collaboration and speed of business
